

Smarter Management, Safer Spaces: Optimising Visitor Access

Access Control

Verified’s clear visual identification screens allow site managers and receptionists to swiftly confirm an individual’s compliance with site requirements, facilitating smooth and efficient entry onto the premises.

| Key Features | Description |
|-----------------------|---|
| Role-based Access | Define your criteria for granting access based upon role type i.e. Induction acknowledgements, specific accreditation requirements. |
| Visual Identification | Screen presents a visually intuitive interface including name, user type, and status for quick identification by site managers and reception. |
| Photo ID Requirement | Mandate visitors and contractors to upload and display valid photo identification. |
| Warning notifications | Alert users before denying access if rules are not met, allowing a grace period for compliance. |
| Deny Access | Configure rules to prevent access for visitors or contractors who do not meet all access requirements |
